---

As I show many images on my pages and I want to include raw images when practical I decided to use automatically generated HTML. Most images will be shown like this:[{htmlfile}/srv/www/htdocs/ekr/Articles/Photo/UsingThesePages/index\\_raw.html{/htmlfile}](#)

- Clicking on the image will show an actual pixels view. In all probability it will be downscaled by the web browser. Clicking on the image will normally enlarge it to actual pixels. In most cases the web browser downscales the image so an additional click is needed to view the full image. Full size images are normally JPEGs.

- There will be normally a download link for an actual pixels JPG
- There will normally be a download link to the raw image
- If available an XMP file will be shown
- There may be a raw histogram file
- There may be a textual description

In some cases the original raw images are not included. This would be the case when I compare different renditions of the same raw image for instance. JPEG only images are shown like below.

[{htmlfile}/srv/www/htdocs/ekr/Articles/Photo/UsingThesePages/index\\_jpg.html{/htmlfile}](#)
